Hysterosalpingogram Discharge Instructions

A hysterosalpingogram (HSG) is a procedure that uses fluoroscopy (moving x-rays) and contrast (x-ray dye) to visualize and assess the condition and shape of the uterus and fallopian tubes.

What are the risks associated with HSG?

Severe problems after an HSG are rare. They include an allergic reaction to the dye, injury to the uterus, bleeding or pelvic infection.

Post Procedure Instructions:

- You may experience vaginal spotting (bleeding) and pelvic cramps for 1 day after the procedure. You may use pads for any discharge or bleeding you experience.
- Do not use tampons, douche, or have intercourse for 24 hours after the exam.
- You may take ibuprofen or Tylenol as needed for cramping.
- Your doctor will be contacted with the results of your test and will discuss the results with you.

Please call your doctor if you have any of the following:

- Increasing pain
- Heavy bleeding or a fever at any time following the exam
- Foul-smelling vaginal discharge
- Vomiting

Seek EMERGENCY CARE if you have:

- Fainting
- · Severe abdominal pain or cramping
- Heavy vaginal bleeding
- Fever or chills
- Chest pain
- Uncontrolled bleeding

- Confusion or change in mental status
- Difficulty breathing or shortness of breath
- Progressive swelling of any area
- Severe abdominal pain or bloating
- Dizziness or feeling like you are going to pass out

If you have an emergency, go directly to the nearest emergency room or call 911. Do not wait to contact our staff.
